

CUSTOMER JOURNEY MAP – UNESCO WORLD HERITAGE SITES ANALYSIS

Project: UNESCO World Heritage Sites Analysis using Tableau

Goal: Provide users with interactive insights and visual stories about UNESCO World Heritage Sites.

STAGES	1 AWARENESS 	2 ACCESS & DATA COLLECTION 	3 DATA PREPARATION & CLEANING 	4 DATA ANALYSIS & VISUALIZATION 	5 DASHBOARD & STORY CREATION 	6 PUBLISH & SHARE 	7 DEPLOYMENT (FLASK APP) 	8 USER ENGAGEMENT & INSIGHTS 
STEPS	- Identify interest in UNESCO sites - Explore available datasets - Understand data fields & scope	- Download UNESCO World Heritage dataset (CSV/Excel) - Review data documentation - Store dataset locally	- Load data in Python (Pandas) - Handle missing values - Clean & transform data - Save cleaned data	- Analyze trends (country, region, category, year) - Create calculations & measures - Explore patterns & insights	- Build interactive dashboards in Tableau Desktop - Create stories to describe insights - Add filters & parameters	- Publish dashboards & stories to Tableau Public - Generate shareable links - Share with audience	- Embed Tableau Public dashboards in Flask web app - Build user-friendly interface - Deploy application	- End users explore dashboards - Gain insights about heritage sites - Use insights for research, reports, decisions
USER INTERACTIONS	 Researcher / Analyst	 Download Dataset	 Python (Pandas)	 Tableau Desktop	 Dashboards & Stories	 Tableau Public	 Flask Web App	 End Users
GOALS & MOTIVATIONS 	- Find reliable heritage data - Understand what can be analyzed	- Get authentic data - Ensure data completeness - Prepare for analysis	- Ensure data quality - Standardize formats - Create analysis-ready dataset	- Discover meaningful patterns - Answer key questions	- Present insights clearly - Make dashboards interactive	- Make insights accessible - Enable easy sharing	- Provide seamless user experience - Make app easily accessible	- Explore insights interactively - Support research & decision making
POSITIVE MOMENTS 	- Found useful dataset - Clear information about data	- Dataset is complete - Easy to understand structure	- Clean data loaded successfully - Issues identified and fixed	- Interesting patterns found - Insights are meaningful	- Dashboards look interactive - Stories convey insights well	- Dashboards published successfully - Link generated	- App works smoothly - Dashboards load perfectly	- Insights are useful - Easy to explore and understand
NEGATIVE MOMENTS 	- Hard to find reliable data - Unclear data fields	- Dataset incomplete - Confusing format	- Missing values - Inconsistent data - Errors during cleaning	- Data not in correct format - Calculations not working	- Dashboards not interactive enough - Story not clear	- Publishing errors - Link not accessible - Data not updated	- App errors - Slow loading - Embedding issues	- Difficult to use - Insights not meeting needs
AREAS OF OPPORTUNITY 	- Improve data availability - Provide sample insights	- Automate data fetching - Validate data quality	- Automate cleaning process - Create reusable scripts	- Add advanced analytics - Include more dimensions	- Improve design - Add more filters & drill-downs	- Schedule data refresh - Maintain published content	- Improve UI/UX - Add more features	- Collect user feedback - Continuously improve insights
TOUCHPOINTS / TOOLS 	Web Search Documentation 	UNESCO Dataset (CSV/Excel) 	Python (Pandas) Jupyter Notebook  	Tableau Desktop 	Tableau Desktop (Story Point) 	Tableau Public 	Flask (Python) HTML / CSS / JS    	Web Browser (End Users)
