

A Sprint is a fixed period during which the project team works to complete a predefined set of tasks. In this project, two sprints were planned to complete all development activities.

An Epic is a major functional requirement that is divided into smaller user stories. Each epic represents a significant phase of the project, such as data collection, data preparation, data visualization, dashboard development, and story development.

A User Story is a small, manageable task that contributes to completing an epic. Every user story is assigned a story point based on the estimated effort required.

A **Story Point** represents the complexity and effort needed to complete a task. The project uses the Fibonacci estimation technique.

1 – Very Easy Task

2 – Easy Task

3 – Moderate Task

5 – Complex Task

Story Point -5 (1,2,3,5)

Sprint 1

Data Collection (Epic 1)

- **Collect UNESCO World Heritage Sites Dataset (USN-1) – 2**
- **Load Dataset into Tableau Desktop (USN-2) – 1**

Data Preparation (Epic 2)

- **Handle Missing Values and Clean Data (USN-3) – 3**
- **Create Calculated Fields for Analysis (USN-4) – 3**
- **Standardize and Validate Heritage Data (USN-5) – 3**

Total Story Points in Sprint 1

= 2 + 1 + 3 + 3 + 3

= 12 Story Points

Sprint 2

Data Visualization (Epic 3)

- **Develop Bar Chart Visualization (USN-6) – 2**
- **Develop Pie Chart Visualization (USN-7) – 2**
- **Develop Line Chart Visualization (USN-8) – 2**
- **Develop Interactive Map Visualization (USN-9) – 4**

Dashboard Development (Epic 4)

- **Create Interactive Tableau Dashboard (USN-10) – 5**

Story Development (Epic 5)

- **Develop Tableau Story with Interactive Story Points (USN-11) – 5**

Total Story Points in Sprint 2

$$= 2 + 2 + 2 + 4 + 5 + 5$$

$$= 20 \text{ Story Points}$$

Total Story Points

$$\text{Sprint 1} = 12$$

$$\text{Sprint 2} = 20$$

$$\text{Overall, Story Points} = 32$$

Velocity Calculation

Velocity represents the amount of work completed by the team in each sprint.

Formula:

$$\text{Velocity} = \text{Total Story Points Completed} \div \text{Number of Sprints}$$

$$\text{Total Story Points Completed} = 12 + 20 = 32$$

$$\text{Number of Sprints} = 2$$

$$\text{Velocity} = 32 \div 2 = 16 \text{ Story Points per Sprint}$$

Your team's velocity is 16 Story Points per Sprint.
